

## Laboratory Activity 1: Creating your first web page

Learning web page design starts with knowing and understanding the fundamental HTML tags for formatting and structuring your webpage through a basic webpage text editor like Notepad++. You will be able to distinguish the tags that belong to the head and body section of a webpage.

Instructions:

1. Create a web page new document that will display your resume on a web page. Refer to the sample output Figure E4. Observe the format of the document  
  
e.g. bold, italics, lines, etc. and recreate this in your document.
2. Include meta tag containing your name as the web page author and keywords to describe the content of your web page.
3. Font.
  - a. Document Body: Tahoma, 3 to 5 points.
  - b. Section titles (name and headers): Courier New, <h3>, blue
4. Background Color:
  - a. Assign a background color for the webpage.
  - b. Background color should be pastel or anything subtle.
5. Replace the name in the example with your own name and set the font color to "blue" if you are a male student or "red" if you are female.
6. Replace all information given with your own information.
7. The title of the webpage should be Your Name + Resume e.g: Juan Sarmiento Resume
8. Save the file as Exercise1.html.
9. Submit online.
